About Cryptocurrency

ABOUT CRYPTO CURRENCY

Crypto currency is a digital or virtual form of currency that uses cryptography for security and operates independently of a central authority such as a government or bank. Bitcoin is the first and most well-known cryptocurrency, but there are thousands of others including Ethereum, Ripple, and Litecoin. Cryptocurrency utilizes blockchain technology to maintain a decentralized and transparent ledger for online purchases, investments, and remittances, and has gained popularity for its potential to offer financial privacy, lower transaction fees, and enable borderless transactions.

03

About MATIC Coin

Powering the Polygon experience

MATIC is the currency of Polygon that enables users to interact with tens of thousands of dApps involved in our ecosystem. It is also used to secure the network by staking.

Gas Token

MATIC is the lifeblood of Polygon PoS. When you conduct any transaction or use an application built on Polygon PoS, you'll pay a small fee in MATIC to use Polygon PoS. This fee is an incentive for validators to process and verify what you're trying to do.

Network Security

Polygon employs a proof of stake mechanism that uses staked MATIC to reach consensus on the network. By staking MATIC, you can secure Polygon PoS and earn rewards. In this system, validators are disincentivized from engaging in any malicious behavior.
